Daily Weather Threat Briefing

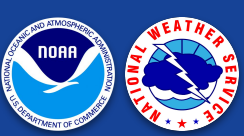

Regional Operations Center

Western Region

Monday, January 30

Day 1 (Monday): Light to moderate snowfall, with relatively low snow levels, will likely cause some travel impacts along many passes in southern California. Cold overnight temperatures will develop in the wake of the storm system.

Weather Key Points

Regional Operations Center

Western Region

Monday, January 30

- A storm system will continue to move through the state Monday, bringing precipitation to southern California, and gusty winds to both northern and southern California
 - Mainly light rainfall amounts are forecast for the lower elevations, with light to moderate snow accumulation in the southern California mountains
 - Snow levels will drop down to 2500-3000 feet over southern California, with travel impacts expected over many southern passes through early Tuesday
 - A few heavier storms in far southern California could result in urban flooding and runoff in small creeks and arroyos, but flash flooding is not expected
 - The strongest winds in northern California Monday are expected for the northern/western side of the Sacramento Valley and over the Sierra
- Cold overnight temperatures are expected through at least the middle of the week
 - Overnight temperatures will fall to near or below freezing for many areas, with some locations potentially seeing record low temperatures for the date
 - Temperatures will likely be dangerous for vulnerable populations and plumbing
- Another round of light rain and mountain snowfall is likely across primarily northern California Thursday night into Friday, and potentially again over the weekend

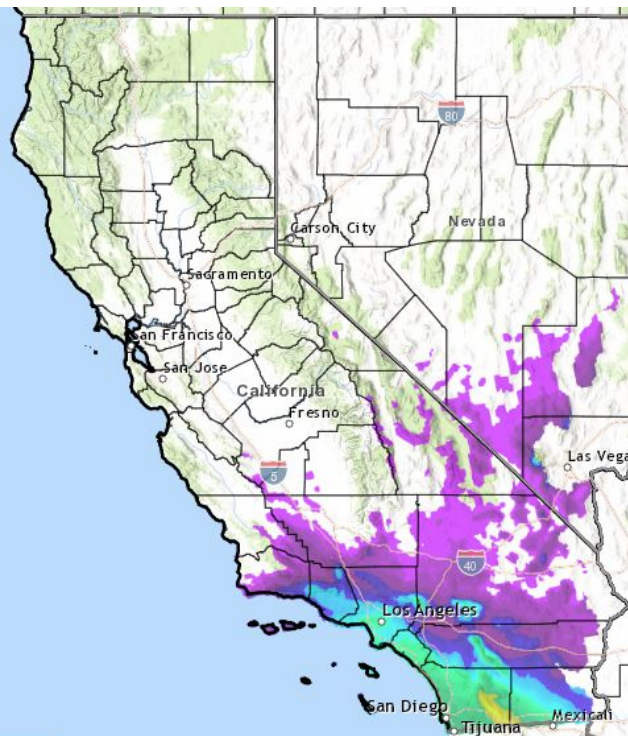

Daily Precipitation Forecast

Western Region

Monday, January 30

Monday

Tuesday

Wednesday

Important Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms will produce locally much higher rainfall amounts.

Precipitation (inches)

Weather Outlook (6-14 Days)

Regional Operations Center

Western Region

Monday, January 30

6-10 Day Outlook (February 4 - February 8)

Temperatures

- Below normal temperatures are favored statewide

Precipitation

- Above normal precipitation is favored for the northern half of the state, with near to below normal precipitation favored for the southern half

8-14 Day Outlook (February 6 - February 12)

Temperatures

- Below normal temperatures are favored statewide

Precipitation

- Above normal precipitation is slightly favored across the southern two-thirds of California, with near normal precipitation favored for northern California

Impact Level Definition

1. **Impactful weather is not expected.**
2. **Potential threat to lives and property if no/incorrect actions are taken.**
 - a. Localized impacts on commerce possible.
 - b. Includes events that occur frequently.
3. **Potential threat to lives and property if no/incorrect actions are taken.**
 - a. Impacts on commerce possible.
 - b. Includes events that occur a few times per year.
4. **Actions likely needed to save lives and/or property.**
 - a. Significant impacts to commerce possible.
 - b. Includes events that occur infrequently.
5. **Actions required to save lives and/or property.**
 - a. Significant and extended impacts to commerce.
 - b. Includes exceptionally rare events.
